PRODUCT

MICROCLIMATE

Invest in ClimateControl Pro for a smarter, more efficient, and more profitable hog barn management experience. Elevate the standard of care for your animals and take a step into the future of farming.

Remote Control

Effortlessly manage your hog barn's climate from any location using your smartphone or computer, ensuring comfort and safety for your hogs anytime, anywhere.

History Tracking

Access a comprehensive log of environmental conditions, offering valuable insights for data-driven decision-making and improved barn management.

Alarm Notifications

Receive immediate alerts for critical environmental changes, enabling swift action to maintain optimal conditions for your hogs' health and safety.

Increased Efficiency

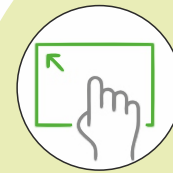

Optimize climate control for better hog health and growth, while reducing energy usage and operational costs for greater profitability.

The integration with Fetura CLOUD enables remote access and control, while the system's sophisticated algorithms analyze historical data to predict and prevent potential issues, ensuring a consistently optimized environment for your hogs.

How it works?

ClimateControl Pro operates on an advanced system that integrates seamlessly with your existing hog barn infrastructure.

The controller continuously monitors various environmental factors, including temperature, humidity, ammonia, and CO2 levels. It then automatically adjusts ventilation, heating, and cooling systems to maintain the ideal conditions.
